On Premise

EDT Software on your hardware, on your network.

PROCESS. ANALYZE. REVIEW. PRODUCE. PRESENT.

ALL ON ONE EASY TO USE SOFTWARE PLATFORM.

On Premise

The traditional deployment of EDT software is an On Premise installation behind the firewall on your hardware in your network or in a data center or cloud environment you own and manage. We simply provide and support our software while your own IT team looks after the hardware and network infrastructure and maintains the Microsoft SQL database.

Under this model, EDT software is offered via a simple, transparent, predictable subscription fee. The fee includes maintenance, a support quota and access to upgrades. There are no user fees, no data hosting fees and no transaction or processing charges.

Benefits

- **Control** - you have full control over the whole EDT environment running on your hardware

- **Easy licensing** - a single, transparent, affordable annual subscription fee

- **Unlimited processing resources** - no core based pricing

- **No volume based charges** - no per gigabyte or document charges for hosting or processing

- **No user fees** - add new users to cases without incurring additional fees

- **Privacy & Confidentiality** – you have the comfort of knowing that privacy, confidentiality and security are entirely in your hands and under your control.
